EDUCATION

Southern Connecticut State University

Bachelor of Science in Computer Science

New Haven, CT

Graduated May 2025

- **Relevant Coursework:** Algorithms and Data Structures, Object-Oriented Programming, Database Applications and Design, Artificial Intelligence, Web Development

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, Typescript, HTML/CSS

Frameworks: React, Node.js, Flask, PostgreSQL, Gherkin

Tools: Git, Github, Postman, JUnit, IntelliJ, VS Code

WORK EXPERIENCE

Victory Waves | Software Engineering Intern | New Haven, CT

September 2024 - December 2024

- * Developed a phonebanking app using React Native, Expo, and Twilio, adopted by candidates for the Connecticut General Assembly, NYC Council, and U.S. Congress to enhance campaign outreach.
- * Improved call management speed by 20% by implementing automated call bridging, facilitating seamless connections between phonebankers and contacts via Twilio's API.
- * Streamlined dial session management, allowing phonebankers to easily navigate contacts and manage call notes, supporting over 100 political calls daily.

UKG | Software Engineering Intern | Lowell, MA

May 2024 - August 2024

- * Broadened automated testing frameworks using RESTful APIs to cover new international payroll features, ensuring comprehensive and reliable test coverage.
- * Actively participated in Agile development processes, including sprint planning, daily stand-ups, and sprint reviews to ensure timely and efficient project progression
- * Upgraded an older JSP-style web page to a modern React-based UI using RESTful APIs, resulting in improved performance and user experience.
- * Performed functional testing of the front-end using Selenium and Gherkin, creating clear and effective test scenarios to validate user interactions and application behavior.

PROJECTS

Debatably.io | React, Node.js, WebRTC, PostgreSQL, Docker, Whisper, GPT-4o

- * Built a live 1-on-1 video debate platform with real-time transcription and AI-powered judging using WebRTC, Whisper, and GPT-4o
- * Developed backend services for audio upload, transcription, and grading, integrating with Supabase Storage and OpenAI APIs.
- * Developed and deployed backend services using Docker and Cloud Run, enabling scalable and containerized API access.
- * Built a signaling server using Socket.IO to establish peer-to-peer video and audio communication via WebRTC

NBA Data Analyzer | React, Python, Flask, PostgreSQL

- * Designed a user-interactive web application providing users with the ability to retrieve NBA season data through simple English language queries.
- * Implemented an efficient caching system to retain previously executed queries. Significantly minimizing API requests, reducing response time, and lowering operational costs.
- * Implemented Flask-based back-end that utilized Natural Language Processing techniques to interpret and convert user-provided English queries into corresponding SQL queries, efficiently fetching the requested data from a PostgreSQL database.
